Step Into C++: Using Existing Methods

Mr. Neat

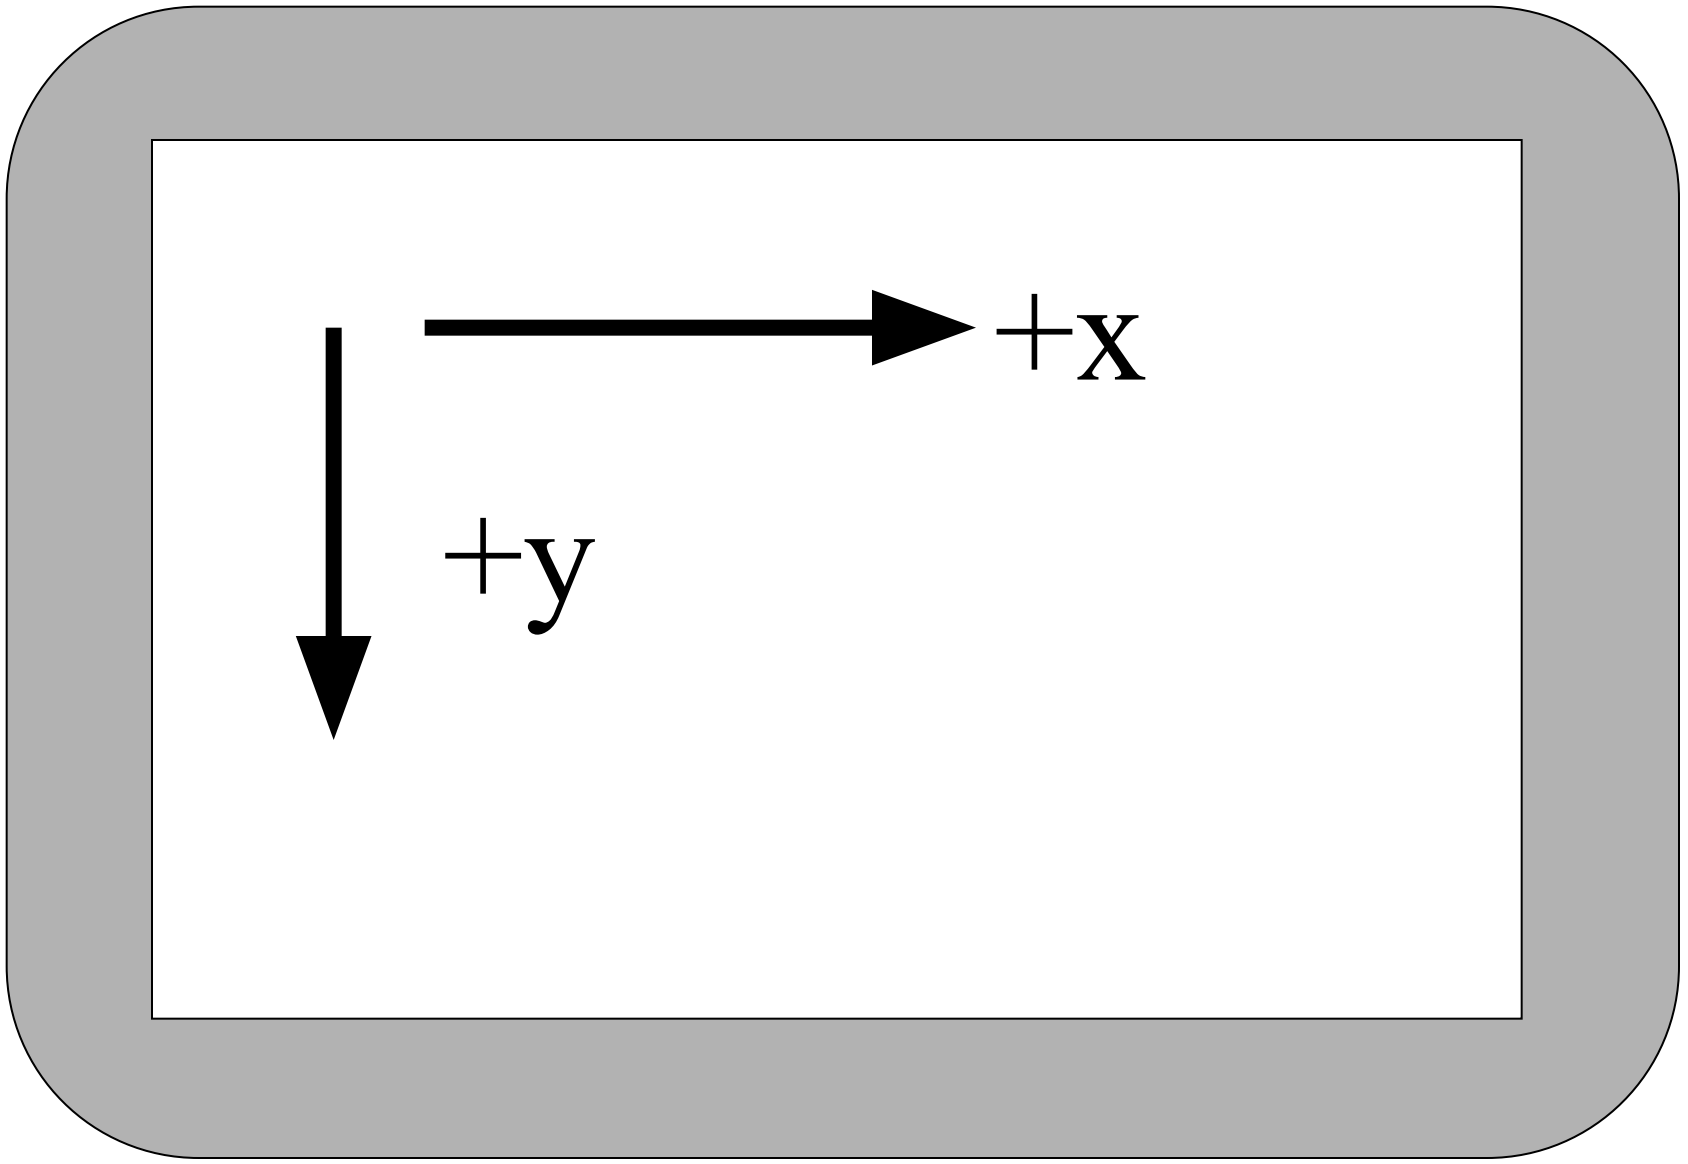
Java

C++ has 1000's of built in methods!

We are going to use one called gotoxy.

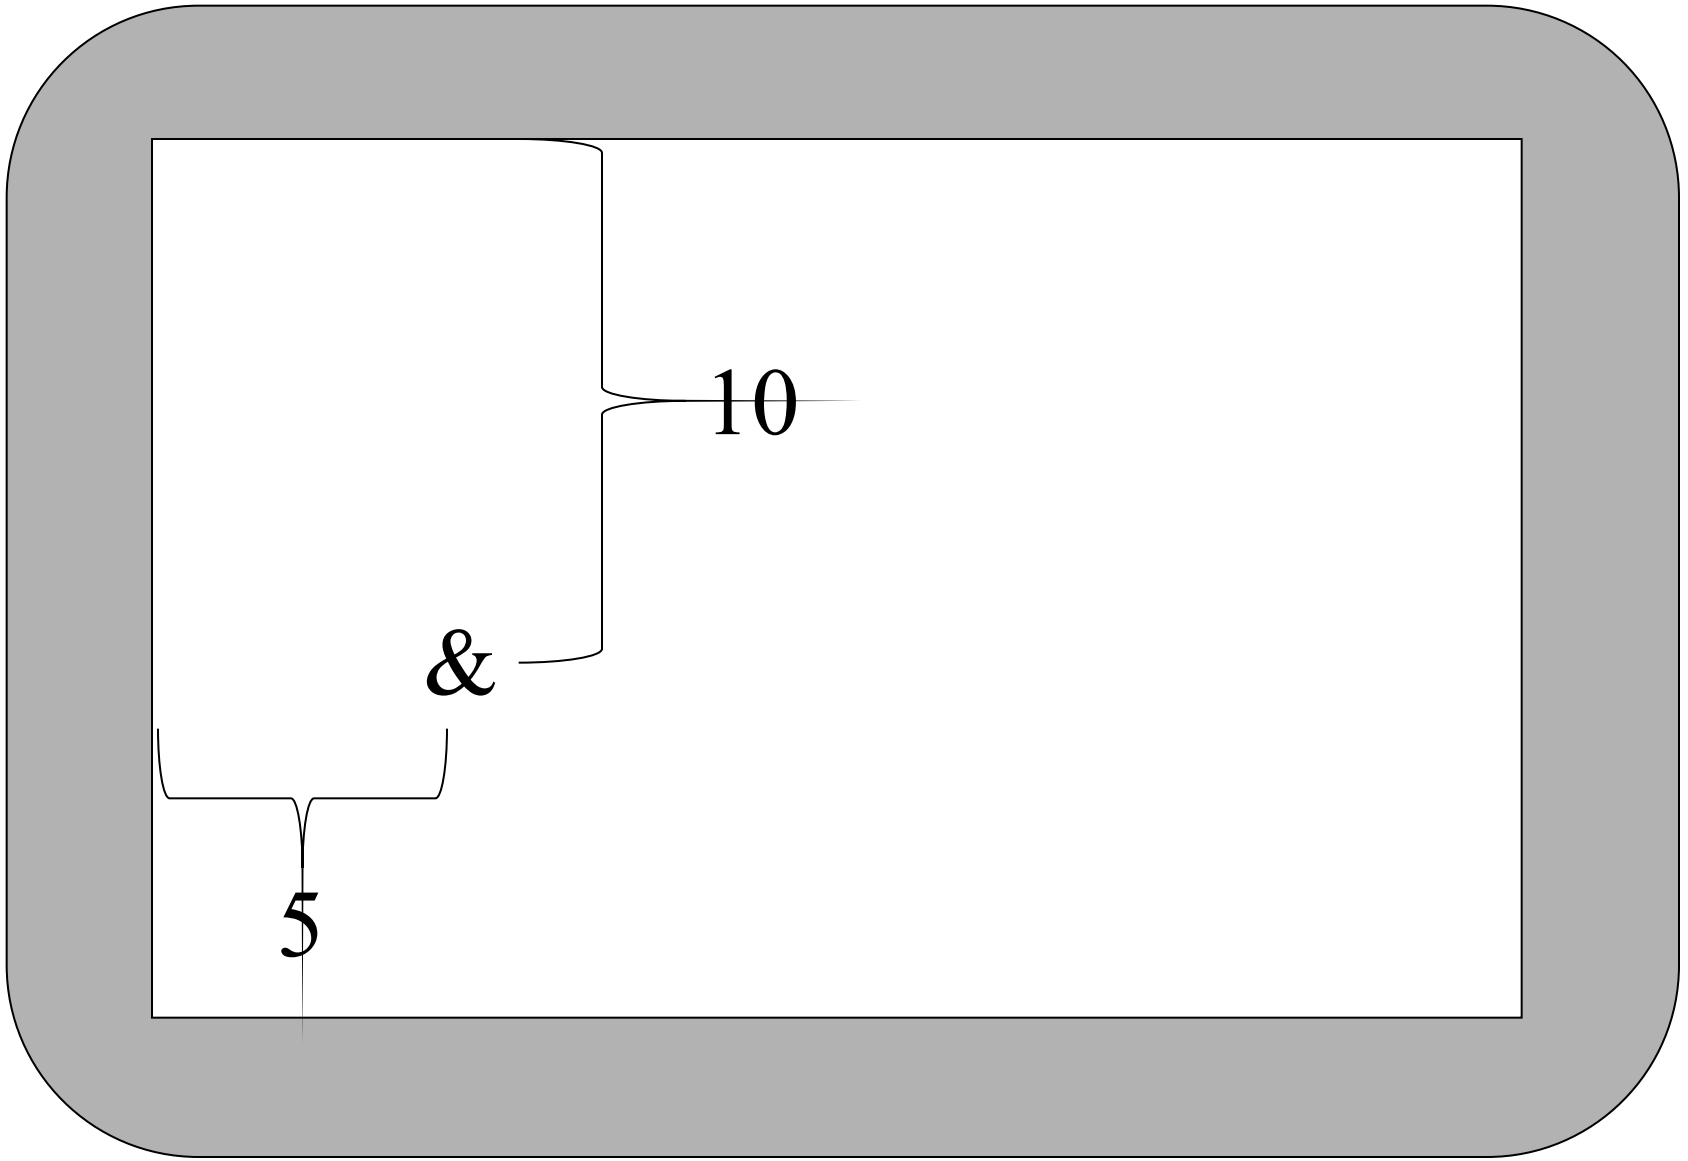
gotoxy Overview

- gotoxy allows you to place the cursor anywhere in the command window
- the method is only useful when used in conjunction with cout <<



+x
+y

```
gotoxy(5,10);
cout << '&';
```



No more endl's!!!

Use gotoxy to position cursor.

(Don't forget to cout something)

C++ Lab4 - drawline+

- add the option to draw a diagonal line on the screen
- let the user pick the line symbol, line length and whether it is horizontal, vertical, or diagonal

Please enter the symbol: @
Please enter line length: 3
horizontal, vertical or
diagonal: d
